Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

With respect to any drug or pharmaceutical products identified, readers are advised to check the most current information provided (i) on procedures featured or (ii) by the manufacturer of each product to be administered, to verify the recommended dose or formula, the method and duration of administration, and contraindications. It is the responsibility of practitioners, relying on their own experience and knowledge of their patients, to make diagnoses, to determine dosages and the best treatment for each individual patient, and to take all appropriate safety precautions.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contents

UNIT I

Introduction to Physiology: The Cell and General Physiology

CHAPTER 1

Functional Organization of the Human Body and Control of the "Internal Environment"

Cells Are the Living Units of the Body	3
Extracellular Fluid—The "Internal Environment"	3
Homeostasis—Maintenance of a Nearly Constant Internal Environment	4
Control Systems of the Body	6
Summary—Automaticity of the Body	10

CHAPTER 2

The Cell and Its Functions

Organization of the Cell	11
Physical Structure of the Cell	11
Comparison of the Animal Cell With Prokaryotic Forms of Life	12
Functional Systems of the Cell	18
Locomotion of Cells	19

CHAPTER 3

Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction

Genes in the Cell Nucleus Control Protein Synthesis	24
The DNA Code in the Cell Nucleus Is Transferred to RNA Code in the Cell Cytoplasm—The Process of Transcription	27
Synthesis of Other Substances in the Cell	27
Control of Gene Function and Biochemical Activity in Cells	30
The DNA-Genetic System Controls Cell Reproduction	35
Cell Differentiation	37
Apoptosis—Programmed Cell Death	41
Cancer	41

UNIT II

Membrane Physiology, Nerve, and Muscle

CHAPTER 4

Transport of Substances Through Cell Membranes

The Cell Membrane Consists of a Lipid Bilayer With Cell Membrane Transport Proteins	47
Diffusion	47
"Active Transport" of Substances Through Membranes	54

CHAPTER 5

Membrane Potentials and Action Potentials

Basic Physics of Membrane Potentials	61
Measuring the Membrane Potential	62
Resting Membrane Potential of Neurons	63
Neuron Action Potential	65
Propagation of the Action Potential	69
Re-establishing Sodium and Potassium Ionic Gradients After Action Potentials Are Completed—Importance of Energy Metabolism	69
Plateau in Some Action Potentials	70
Rhythmicity of Some Excitable Tissues—Repetitive Discharge	70
Special Characteristics of Signal Transmission in Nerve Trunks	71

CHAPTER 6

Contraction of Skeletal Muscle

Physiological Anatomy of Skeletal Muscle	75
General Mechanism of Muscle Contraction	77
Molecular Mechanism of Muscle Contraction	78
Energetics of Muscle Contraction	82
Characteristics of Whole Muscle Contraction	83

CHAPTER 7

Excitation of Skeletal Muscle: Neuromuscular Transmission and Excitation-Contraction Coupling	89
Transmission of Impulses From Nerve Endings to Skeletal Muscle Fibers: The Neuromuscular Junction	89
Muscle Action Potential	93
Excitation-Contraction Coupling	93

CHAPTER 8

Excitation and Contraction of Smooth Muscle	97
Contraction of Smooth Muscle	97
Regulation of Contraction by Calcium Ions	99
Nervous and Hormonal Control of Smooth Muscle Contraction	102

UNIT III**The Heart****CHAPTER 9**

Cardiac Muscle; The Heart as a Pump and Function of the Heart Valves	109
Physiology of Cardiac Muscle	109
Cardiac Cycle	113
Regulation of Heart Pumping	119

CHAPTER 10

Rhythmical Excitation of the Heart	123
Specialized Excitatory and Conductive System of the Heart	123
Control of Excitation and Conduction in the Heart	126

CHAPTER 11

The Normal Electrocardiogram	131
Characteristics of the Normal Electrocardiogram	131
Flow of Current Around the Heart During the Cardiac Cycle	133
Electrocardiographic Leads	134
Methods for Recording Electrocardiograms	137

CHAPTER 12

Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis	139
Principles of Vectorial Analysis of Electrocardiograms	139
Vectorial Analysis of the Normal Electrocardiogram	141
Mean Electrical Axis of the Ventricular QRS and Its Significance	144

Conditions That Cause Abnormal Voltages of the QRS Complex	147
Prolonged and Bizarre Patterns of the QRS Complex	148
Current of Injury	148
Abnormalities in the T Wave	152

CHAPTER 13

Cardiac Arrhythmias and Their Electrocardiographic Interpretation	155
Abnormal Sinus Rhythms	155
Abnormal Rhythms That Result From Block of Heart Signals Within the Intracardiac Conduction Pathways	156
Premature Contractions	158
Paroxysmal Tachycardia	160
Ventricular Fibrillation	161
Atrial Fibrillation	164
Atrial Flutter	165
Cardiac Arrest	165

UNIT IV**The Circulation****CHAPTER 14**

Overview of the Circulation; Biophysics of Pressure, Flow, and Resistance	169
Physical Characteristics of the Circulation	169
Basic Principles of Circulatory Function	170
Interrelationships of Pressure, Flow, and Resistance	171

CHAPTER 15

Vascular Distensibility and Functions of the Arterial and Venous Systems	179
Vascular Distensibility	179
Arterial Pressure Pulsations	180
Veins and Their Functions	184

CHAPTER 16

The Microcirculation and Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow	189
Structure of the Microcirculation and Capillary System	189
Flow of Blood in the Capillaries: Vasomotion	190
Exchange of Water, Nutrients, and Other Substances Between the Blood and Interstitial Fluid	191
Interstitial and Interstitial Fluid	192
Fluid Filtration Across Capillaries Is Determined by Hydrostatic and Colloid Osmotic Pressures and the Capillary Filtration Coefficient	193
Lymphatic System	198

CHAPTER 17		CHAPTER 23	
Local and Humoral Control of Tissue Blood Flow	203	Heart Valves and Heart Sounds; Valvular and Congenital Heart Defects	283
Local Control of Blood Flow in Response to Tissue Needs	203	Heart Sounds	283
Mechanisms of Blood Flow Control	203	Abnormal Circulatory Dynamics in Valvular Heart Disease	286
Humoral Control of the Circulation	212	Abnormal Circulatory Dynamics in Congenital Heart Defects	288
CHAPTER 18		Use of Extracorporeal Circulation During Cardiac Surgery	290
Nervous Regulation of the Circulation and Rapid Control of Arterial Pressure	215	Hypertrophy of the Heart in Valvular and Congenital Heart Disease	290
Nervous Regulation of the Circulation	215	CHAPTER 24	
Special Features of Nervous Control of Arterial Pressure	224	Circulatory Shock and Its Treatment	293
CHAPTER 19		Physiological Causes of Shock	293
Role of the Kidneys in Long-Term Control of Arterial Pressure and in Hypertension: The Integrated System for Arterial Pressure Regulation	227	Shock Caused by Hypovolemia—Hemorrhagic Shock	294
Renal-Body Fluid System for Arterial Pressure Control	227	Neurogenic Shock—Increased Vascular Capacity	299
The Renin-Angiotensin System: Its Role in Arterial Pressure Control	234	Anaphylactic Shock and Histamine Shock	300
Summary of the Integrated, Multifaceted System for Arterial Pressure Regulation	241	Septic Shock	300
CHAPTER 20		Physiology of Treatment in Shock	301
Cardiac Output, Venous Return, and Their Regulation	245	Circulatory Arrest	302
Normal Values for Cardiac Output at Rest and During Activity	245	UNIT V	
Control of Cardiac Output by Venous Return—The Frank-Starling Mechanism of the Heart	245	The Body Fluids and Kidneys	
Pathologically High or Low Cardiac Outputs	248	CHAPTER 25	
Methods for Measuring Cardiac Output	256	The Body Fluid Compartments: Extracellular and Intracellular Fluids; Edema	305
CHAPTER 21		Fluid Intake and Output Are Balanced During Steady-State Conditions	305
Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease	259	Body Fluid Compartments	306
Blood Flow Regulation in Skeletal Muscle at Rest and During Exercise	259	Constituents of Extracellular and Intracellular Fluids	307
Coronary Circulation	262	Measurement of Fluid Volumes in the Different Body Fluid Compartments—The Indicator-Dilution Principle	308
CHAPTER 22		Determination of Volumes of Specific Body Fluid Compartments	309
Cardiac Failure	271	Regulation of Fluid Exchange and Osmotic Equilibrium Between Intracellular and Extracellular Fluid	310
Circulatory Dynamics in Cardiac Failure	271	Volume and Osmolality of Extracellular and Intracellular Fluids in Abnormal States	312
Unilateral Left Heart Failure	275	Glucose and Other Solutions Administered for Nutritive Purposes	314
Low-Output Cardiac Failure—Cardiogenic Shock	275	Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypernatremia	314
Edema in Patients With Cardiac Failure	275	Edema: Excess Fluid in the Tissues	316
Cardiac Reserve	277	Fluids in the “Potential Spaces” of the Body	320

CHAPTER 26**The Urinary System: Functional Anatomy and Urine Formation by the Kidneys**

Multiple Functions of the Kidneys	323
Physiological Anatomy of the Kidneys	324
Micturition	327
Urine Formation Results From Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	331

CHAPTER 27**Glomerular Filtration, Renal Blood Flow, and Their Control**

Glomerular Filtration—The First Step in Urine Formation	335
Determinants of the GFR	337
Renal Blood Flow	340
Physiological Control of Glomerular Filtration and Renal Blood Flow	341
Autoregulation of GFR and Renal Blood Flow	342

CHAPTER 28**Renal Tubular Reabsorption and Secretion**

Tubular Reabsorption Is Quantitatively Large and Highly Selective	347
Tubular Reabsorption Includes Passive and Active Mechanisms	347
Reabsorption and Secretion Along Different Parts of the Nephron	353
Regulation of Tubular Reabsorption	359
Use of Clearance Methods to Quantify Kidney Function	365

CHAPTER 29**Urine Concentration and Dilution; Regulation of Extracellular Fluid Osmolarity and Sodium Concentration**

Kidneys Excrete Excess Water by Forming Dilute Urine	371
Kidneys Conserve Water by Excreting Concentrated Urine	371
Special Characteristics of the Loop of Henle That Cause Solutes to be Trapped in the Renal Medulla	373
Control of Extracellular Fluid Osmolarity and Sodium Concentration	374
Osmoreceptor-ADH Feedback System	381
Importance of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	381

CHAPTER 30**Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium; Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume**

389

Regulation of Extracellular Fluid Potassium Concentration and Potassium Excretion	389
Control of Renal Calcium Excretion and Extracellular Calcium Ion Concentration	396
Control of Renal Magnesium Excretion and Extracellular Magnesium Ion Concentration	398
Integration of Renal Mechanisms for Control of Extracellular Fluid	398
Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body Sodium and Fluid Balance	399
Distribution of Extracellular Fluid Between the Interstitial Spaces and Vascular System	401
Nervous and Hormonal Factors Increase the Effectiveness of Renal-Body Fluid Feedback Control	402
Integrated Responses to Changes in Sodium Intake	405
Conditions That Cause Large Increases in Blood Volume and Extracellular Fluid Volume	405
Conditions That Cause Large Increases in Extracellular Fluid Volume but With Normal Blood Volume	406

CHAPTER 31**Acid-Base Regulation**

H^+ Concentration Is Precisely Regulated	409
Acids and Bases—Their Definitions and Meanings	409
Defending Against Changes in H^+ Concentration: Buffers, Lungs, and Kidneys	410
Buffering of H^+ in the Body Fluids	410
Bicarbonate Buffer System	411
Phosphate Buffer System	413
Proteins Are Important Intracellular Buffers	413
Respiratory Regulation of Acid-Base Balance	414
Renal Control of Acid-Base Balance	415
Secretion of H^+ and Reabsorption of HCO_3^- by the Renal Tubules	416
Combination of Excess H^+ With Phosphate and Ammonia Buffers in the Tubule Generates "New" HCO_3^-	418
Quantifying Renal Acid-Base Excretion	420
Renal Correction of Acidosis—Increased Excretion of H^+ and Addition of HCO_3^- to the Extracellular Fluid	421
Renal Correction of Alkalosis—Decreased Tubular Secretion of H^+ and Increased Excretion of HCO_3^-	422
Clinical Causes of Acid-Base Disorders	422

CHAPTER 32**Diuretics, Kidney Diseases**

Diuretics and Their Mechanisms of Action	427
Kidney Diseases	429
Acute Kidney Injury	429

Chronic Kidney Disease Is Often Associated With Irreversible Loss of Functional Nephrons	432
Treatment of Renal Failure by Transplantation or by Dialysis With an Artificial Kidney	440

UNIT VI

Blood Cells, Immunity, and Blood Coagulation

CHAPTER 33	
Red Blood Cells, Anemia, and Polycythemia	445
Red Blood Cells (Erythrocytes)	445
Anemias	452
Polycythemia	453
CHAPTER 34	
Resistance of the Body to Infection: I. Leukocytes, Granulocytes, the Monocyte-Macrophage System, and Inflammation	455
Leukocytes (White Blood Cells)	455
Neutrophils and Macrophages Defend Against Infections	457
Monocyte-Macrophage Cell System (Reticuloendothelial System)	458
Inflammation: Role of Neutrophils and Macrophages	460
Eosinophils	462
Basophils	462
Leukopenia	463
Leukemias	463
CHAPTER 35	
Resistance of the Body to Infection: II. Immunity and Allergy	465
Acquired (Adaptive) Immunity	465
Allergy and Hypersensitivity	475
CHAPTER 36	
Blood Types; Transfusion; Tissue and Organ Transplantation	477
Antigenicity Causes Immune Reactions of Blood	477
O-A-B Blood Types	477
Rh Blood Types	479
Transplantation of Tissues and Organs	481
CHAPTER 37	
Hemostasis and Blood Coagulation	483
Hemostasis Events	483
Mechanism of Blood Coagulation	485

Conditions That Cause Excessive Bleeding in Humans	490
Thromboembolic Conditions	491
Anticoagulants for Clinical Use	492
Blood Coagulation Tests	493

UNIT VII

Respiration

CHAPTER 38	
Pulmonary Ventilation	497
Mechanics of Pulmonary Ventilation	497
Pulmonary Volumes and Capacities	501
Alveolar Ventilation	503
Functions of the Respiratory Passageways	504
CHAPTER 39	
Pulmonary Circulation, Pulmonary Edema, Pleural Fluid	509
Physiological Anatomy of the Pulmonary Circulatory System	509
Pressures in the Pulmonary System	509
Blood Volume of the Lungs	510
Blood Flow Through the Lungs and Its Distribution	510
Effect of Hydrostatic Pressure Gradients in the Lungs on Regional Pulmonary Blood Flow	511
Pulmonary Capillary Dynamics	513
Fluid in the Pleural Cavity	515
CHAPTER 40	
Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane	517
Physics of Gas Diffusion and Gas Partial Pressures	517
Compositions of Alveolar Air and Atmospheric Air Are Different	519
Diffusion of Gases Through the Respiratory Membrane	521
CHAPTER 41	
Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids	527
Transport of Oxygen From the Lungs to the Body Tissues	527
Transport of Carbon Dioxide in the Blood	534
Respiratory Exchange Ratio	536
CHAPTER 42	
Regulation of Respiration	539
Respiratory Center	539
Chemical Control of Respiration	541

Peripheral Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control	542
Regulation of Respiration During Exercise	545
Other Factors That Affect Respiration	546

CHAPTER 43**Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy**

Useful Methods for Studying Respiratory Abnormalities	549
Pathophysiology of Specific Pulmonary Abnormalities	551
Hypoxia and Oxygen Therapy	554
Hypercapnia—Excess Carbon Dioxide in the Body Fluids	556
Artificial Respiration	556

UNIT VIII**Aviation, Space, and Deep-Sea Diving Physiology****CHAPTER 44****Aviation, High Altitude, and Space Physiology**

Effects of Low Oxygen Pressure on the Body	561
Effects of Acceleratory Forces on the Body in Aviation and Space Physiology	565
"Artificial Climate" in the Sealed Spacecraft	567
Weightlessness in Space	567

CHAPTER 45**Physiology of Deep-Sea Diving and Other Hyperbaric Conditions**

Effect of High Partial Pressures of Individual Gases on the Body	569
Self-Contained Underwater Breathing Apparatus (SCUBA) Diving	573
Special Physiological Problems in Submarines	574
Hyperbaric Oxygen Therapy	574

UNIT IX**The Nervous System: A. General Principles and Sensory Physiology****CHAPTER 46****Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters**

General Design of the Nervous System	577
Major Levels of Central Nervous System Function	579
Comparison of the Nervous System to a Computer	580
Central Nervous System Synapses	580
Some Special Characteristics of Synaptic Transmission	592
CHAPTER 47	
Sensory Receptors, Neuronal Circuits for Processing Information	595
Types of Sensory Receptors and the Stimuli They Detect	595
Transduction of Sensory Stimuli Into Nerve Impulses	596
Transmission of Signals of Different Intensity in Nerve Tracts—Spatial and Temporal Summation	600
Transmission and Processing of Signals in Neuronal Pools	601
Instability and Stability of Neuronal Circuits	605
CHAPTER 48	
Somatic Sensations: I. General Organization, the Tactile and Position Senses	607
Classification of Somatic Senses	607
Detection and Transmission of Tactile Sensations	607
Sensory Pathways for Transmitting Somatic Signals Into the Central Nervous System	609
Transmission in the Dorsal Column—Medial Lemniscal System	609
Transmission of Less Critical Sensory Signals in the Anterolateral Pathway	616
Some Special Aspects of Somatosensory Function	618
CHAPTER 49	
Somatic Sensations: II. Pain, Headache, and Thermal Sensations	621
Types of Pain and Their Qualities—Fast Pain and Slow Pain	621
Pain Receptors and Their Stimulation	621
Dual Pathways for Transmission of Pain Signals Into the Central Nervous System	622
Pain Suppression (Analgesia) System in the Brain and Spinal Cord	625
Referred Pain	626
Visceral Pain	626
Some Clinical Abnormalities of Pain and Other Somatic Sensations	628
Headache	629
Thermal Sensations	630

UNIT X**The Nervous System:
B. The Special Senses****CHAPTER 50**

The Eye: I. Optics of Vision	635
Physical Principles of Optics	635
Optics of the Eye	638
Fluid System of the Eye—Intraocular Fluid	644

CHAPTER 51

The Eye: II. Receptor and Neural Function of the Retina	647
Anatomy and Function of the Structural Elements of the Retina	647
Photochemistry of Vision	649
Color Vision	654
Neural Function of the Retina	655

CHAPTER 52

The Eye: III. Central Neurophysiology of Vision	661
Visual Pathways	661
Organization and Function of the Visual Cortex	662
Neuronal Patterns of Stimulation During Analysis of the Visual Image	664
Eye Movements and Their Control	666
Autonomic Control of Accommodation and Pupillary Aperture	669

CHAPTER 53

The Sense of Hearing	673
Tympanic Membrane and the Ossicular System	673
Cochlea	674
Central Auditory Mechanisms	679
Hearing Abnormalities	682

CHAPTER 54

The Chemical Senses—Taste and Smell	685
Sense of Taste	685
Sense of Smell	688

UNIT XI**The Nervous System: C. Motor and Integrative Neurophysiology****CHAPTER 55**

Motor Functions of the Spinal Cord; the Cord Reflexes	695
Organization of the Spinal Cord for Motor Functions	695

Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—and Their Roles in Muscle Control	697
Flexor Reflex and the Withdrawal Reflexes	702
Crossed Extensor Reflex	703
Reciprocal Inhibition and Reciprocal Innervation	703
Reflexes of Posture and Locomotion	704
Scratch Reflex	705
Spinal Cord Reflexes That Cause Muscle Spasm	705
Autonomic Reflexes in the Spinal Cord	705
Spinal Cord Transection and Spinal Shock	705

CHAPTER 56

Cortical and Brain Stem Control of Motor Function	707
Motor Cortex and Corticospinal Tract	707
Control of Motor Functions by the Brain Stem	713
Vestibular Sensations and Maintenance of Equilibrium	714
Functions of Brain Stem Nuclei in Controlling Subconscious, Stereotyped Movements	719

CHAPTER 57

Contributions of the Cerebellum and Basal Ganglia to Overall Motor Control	721
The Cerebellum and Its Motor Functions	721
The Basal Ganglia and Their Motor Functions	730
Integration of the Many Parts of the Total Motor Control System	735

CHAPTER 58

Cerebral Cortex, Intellectual Functions of the Brain, Learning, and Memory	737
Physiological Anatomy of the Cerebral Cortex	737
Functions of Specific Cortical Areas	738
Function of the Brain in Communication—Language Input and Language Output	743
Function of the Corpus Callosum and Anterior Commissure to Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres	745
Thoughts, Consciousness, and Memory	745

CHAPTER 59

Behavioral and Motivational Mechanisms of the Brain—The Limbic System and the Hypothalamus	751
Activating—Driving Systems of the Brain	751
Limbic System	754
The Hypothalamus, a Major Control Headquarters for the Limbic System	755

Specific Functions of Other Parts of the Limbic System

759

CHAPTER 60**States of Brain Activity—Sleep, Brain Waves, Epilepsy, Psychoses, and Dementia**

763

Sleep

763

Brain Waves

766

Seizures and Epilepsy

768

Psychotic Behavior—Roles of Specific Neurotransmitter Systems

770

Alzheimer's Disease—Amyloid Plaques and Depressed Memory

771

CHAPTER 61**The Autonomic Nervous System and the Adrenal Medulla**

773

General Organization of the Autonomic Nervous System

773

Basic Characteristics of Sympathetic and Parasympathetic Function

775

Autonomic Reflexes

782

Stimulation of Discrete Organs in Some Instances and Mass Stimulation in Other Instances by the Sympathetic and Parasympathetic Systems

783

Pharmacology of the Autonomic Nervous System

784

CHAPTER 62**Cerebral Blood Flow, Cerebrospinal Fluid, and Brain Metabolism**

787

Cerebral Blood Flow

787

Cerebrospinal Fluid System

790

Brain Metabolism

794

UNIT XII**Gastrointestinal Physiology****CHAPTER 63****General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation**

797

General Principles of Gastrointestinal Motility

797

Neural Control of Gastrointestinal Function—Enteric Nervous System

799

Hormonal Control of Gastrointestinal Motility

802

Functional Types of Movements in the Gastrointestinal Tract

803

Gastrointestinal Blood Flow—Splanchnic Circulation

804

CHAPTER 64**Propulsion and Mixing of Food in the Alimentary Tract**

807

Ingestion of Food

807

Motor Functions of the Stomach

809

Movements of the Small Intestine

812

Movements of the Colon

814

Other Autonomic Reflexes That Affect Bowel Activity

816

CHAPTER 65**Secretory Functions of the Alimentary Tract**

817

General Principles of Alimentary Tract Secretion

817

Secretion of Saliva

819

Esophageal Secretion

821

Gastric Secretion

821

Pancreatic Secretion

825

Bile Secretion by the Liver

827

Secretions of the Small Intestine

830

Secretion of Mucus by the Large Intestine

831

CHAPTER 66**Digestion and Absorption in the Gastrointestinal Tract**

833

Digestion of the Various Foods by Hydrolysis

833

Basic Principles of Gastrointestinal Absorption

837

Absorption in the Small Intestine

837

Absorption in the Large Intestine: Formation of Feces

841

CHAPTER 67**Physiology of Gastrointestinal Disorders**

843

Disorders of Swallowing and the Esophagus

843

Disorders of the Stomach

843

Disorders of the Small Intestine

845

Disorders of the Large Intestine

846

General Disorders of the Gastrointestinal Tract

847

UNIT XIII**Metabolism and Temperature Regulation****CHAPTER 68****Metabolism of Carbohydrates and Formation of Adenosine Triphosphate**

853

Release of Energy From Foods and "Free Energy"

853

Adenosine Triphosphate Is the "Energy Currency" of the Body

853

Central Role of Glucose in Carbohydrate Metabolism	854	Dietary Balances	887
Transport of Glucose Through the Cell Membrane	854	Regulation of Food Intake and Energy Storage	889
Glycogen Is Stored in the Liver and Muscle	855	Obesity	894
Release of Energy From Glucose by the Glycolytic Pathway	856	Inanition, Anorexia, and Cachexia	896
Formation of Large Quantities of ATP by Oxidation of Hydrogen—the Process of Oxidative Phosphorylation	858	Starvation	897
Summary of ATP Formation During the Breakdown of Glucose	859	Vitamins	897
Anaerobic Release of Energy—Anaerobic Glycolysis	860	Mineral Metabolism	900
Release of Energy From Glucose by the Pentose Phosphate Pathway	861		
Formation of Carbohydrates From Proteins and Fats—Gluconeogenesis	861	CHAPTER 73	
		Energetics and Metabolic Rate	903
CHAPTER 69		Adenosine Triphosphate Functions as an “Energy Currency” in Metabolism	903
Lipid Metabolism	863	Control of Energy Release in the Cell	905
Basic Chemical Structure of Triglycerides (Neutral Fat)	863	Metabolic Rate	906
Transport of Lipids in the Body Fluids	863	Energy Metabolism—Factors That Influence Energy Output	907
Fat Deposits	865		
Use of Triglycerides for Energy: Formation of Adenosine Triphosphate	866	CHAPTER 74	
Regulation of Energy Release From Triglycerides	869	Body Temperature Regulation and Fever	911
Phospholipids and Cholesterol	870	Normal Body Temperatures	911
Atherosclerosis	872	Body Temperature Is Controlled by Balancing Heat Production and Heat Loss	911
		Regulation of Body Temperature—Role of the Hypothalamus	915
CHAPTER 70		Abnormalities of Body Temperature Regulation	919
Protein Metabolism	875		
Basic Properties of Proteins	875	UNIT XIV	
Transport and Storage of Amino Acids	875	Endocrinology and Reproduction	
Functional Roles of the Plasma Proteins	877		
Hormonal Regulation of Protein Metabolism	880	CHAPTER 75	
		Introduction to Endocrinology	925
CHAPTER 71		Coordination of Body Functions by Chemical Messengers	925
The Liver as an Organ	881	Chemical Structure and Synthesis of Hormones	925
Physiological Anatomy of the Liver	881	Hormone Secretion, Transport, and Clearance From the Blood	929
Hepatic Vascular and Lymph Systems	881	Mechanisms of Action of Hormones	930
Metabolic Functions of the Liver	883	Measurement of Hormone Concentrations in the Blood	936
Protein Metabolism	883		
Measurement of Bilirubin in the Bile as a Clinical Diagnostic Tool	884	CHAPTER 76	
		Pituitary Hormones and Their Control by the Hypothalamus	939
CHAPTER 72		Pituitary Gland and Its Relation to the Hypothalamus	939
Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals	887	Hypothalamus Controls Pituitary Secretion	940
Energy Intake and Output Are Balanced Under Steady-State Conditions	887	Physiological Functions of Growth Hormone	942
		Posterior Pituitary Gland and Its Relation to the Hypothalamus	948

CHAPTER 77

Thyroid Metabolic Hormones	951
Synthesis and Secretion of the Thyroid Metabolic Hormones	951
Physiological Functions of the Thyroid Hormones	954
Regulation of Thyroid Hormone Secretion	958
Diseases of the Thyroid	960

CHAPTER 78

Adrenocortical Hormones	965
Corticosteroids: Mineralocorticoids, Glucocorticoids, and Androgens	965
Synthesis and Secretion of Adrenocortical Hormones	965
Functions of the Mineralocorticoids—Aldosterone	968
Functions of Glucocorticoids	972
Adrenal Androgens	978
Abnormalities of Adrenocortical Secretion	979

CHAPTER 79

Insulin, Glucagon, and Diabetes Mellitus	983
Physiological Anatomy of the Pancreas	983
Insulin and Its Metabolic Effects	983
Glucagon and Its Functions	992
Somatostatin Inhibits Glucagon and Insulin Secretion	993
Summary of Blood Glucose Regulation	993
Diabetes Mellitus	994

CHAPTER 80

Parathyroid Hormone, Calcitonin, Calcium and Phosphate Metabolism, Vitamin D, Bone, and Teeth	1001
Overview of Calcium and Phosphate Regulation in the Extracellular Fluid and Plasma	1001
Bone and Its Relation to Extracellular Calcium and Phosphate	1003
Vitamin D	1007
Parathyroid Hormone	1009
Calcitonin	1012
Summary of Control of Calcium Ion Concentration	1013
Pathophysiology of Parathyroid Hormone, Vitamin D, and Bone Disease	1014
Physiology of the Teeth	1016

CHAPTER 81

Reproductive and Hormonal Functions of the Male (and Function of the Pineal Gland)	1021
Physiological Anatomy of the Male Sexual Organs	1021

Spermatogenesis	1021
Male Sexual Act	1026
Testosterone and Other Male Sex Hormones	1028
Abnormalities of Male Sexual Function	1033
Erectile Dysfunction in the Male	1034
The Function of the Pineal Gland in Controlling Seasonal Fertility in Some Animals	1034

CHAPTER 82

Female Physiology Before Pregnancy and Female Hormones	1037
Physiological Anatomy of the Female Sexual Organs	1037
Oogenesis and Follicular Development in the Ovaries	1037
Female Hormonal System	1039
Monthly Ovarian Cycle; Function of the Gonadotropic Hormones	1039
Functions of the Ovarian Hormones—Estradiol and Progesterone	1042
Regulation of the Female Monthly Rhythm—Interplay Between the Ovarian and Hypothalamic-Pituitary Hormones	1047
Abnormalities of Secretion by the Ovaries	1051
Female Sexual Act	1051
Female Fertility	1052
Hormonal Suppression of Fertility—"The Pill"	1053
Abnormal Conditions That Cause Female Sterility	1053

CHAPTER 83

Pregnancy and Lactation	1055
Maturation and Fertilization of the Ovum	1055
Early Nutrition of the Embryo	1057
Anatomy and Function of the Placenta	1057
Hormonal Factors in Pregnancy	1059
Response of the Mother's Body to Pregnancy	1062
Parturition	1064
Lactation	1066

CHAPTER 84

Fetal and Neonatal Physiology	1071
Growth and Functional Development of the Fetus	1071
Development of the Organ Systems	1071
Fetal Metabolism	1072
Adjustments of the Infant to Extrauterine Life	1073
Special Functional Problems in the Neonate	1076
Special Problems of Prematurity	1079
Growth and Development of the Child	1080

UNIT XV**Sports Physiology****CHAPTER 85****Sports Physiology****1085**

Female and Male Athletes

1085

Muscles in Exercise

1085

Respiration in Exercise

1090

Cardiovascular System in Exercise

1092

Body Heat in Exercise

1094

Body Fluids and Salt in Exercise

1094

Drugs and Athletes

1095

Body Fitness Prolongs Life

1095**Index****1097**
