

FIFTH EDITION

# HUMAN MOLECULAR GENETICS

TOM STRACHAN  
ANDREW P READ

CRC Press  
Taylor & Francis Group

A GARLAND SCIENCE BOOK

# Contents

<i>Preface</i> .....	<i>ix</i>
<i>About the authors</i> .....	<i>xi</i>
<i>Contributors</i> .....	<i>xiii</i>

## **PART 1 BASICS OF DNA, CHROMOSOMES, CELLS, DEVELOPMENT AND INHERITANCE**

### **1 BASIC PRINCIPLES OF NUCLEIC ACID STRUCTURE AND GENE EXPRESSION..... 3**

1.1 Composition of nucleic acids and polypeptides .....	4
1.2 Base pairing in DNA and RNA, the double helix, and DNA replication .....	9
1.3 RNA transcription and gene expression .....	18
1.4 RNA processing .....	21
1.5 Translation, post-translational processing, and protein structure....	28
Summary .....	39
Further reading .....	40

### **2 FUNDAMENTALS OF CELLS AND CHROMOSOMES..... 41**

2.1 Cell structure and diversity, and cell evolution.....	42
2.2 DNA and chromosome copy number during the cell cycle .....	51
2.3 Cell division and transmission of DNA to daughter cells .....	53

2.4 Structure and function of chromosomes .....	59
Summary .....	67
Further reading .....	67

### **3 FUNDAMENTALS OF CELL-CELL INTERACTIONS AND IMMUNE SYSTEM BIOLOGY..... 69**

3.1 Principles of cell signaling .....	69
3.2 Cell proliferation and programmed cell death .....	76
3.3 Cell adhesion and tissue formation .....	83
3.4 Immune system biology .....	88
Summary .....	104
Further reading .....	104

### **4 ASPECTS OF EARLY MAMMALIAN DEVELOPMENT, CELL DIFFERENTIATION, AND STEM CELLS..... 107**

4.1 Cell lineages and tissue differentiation in early mammalian development .....	107
4.2 Stem cells and cell differentiation.....	124
Summary .....	134
Further reading .....	135

### **5 PATTERNS OF INHERITANCE..... 137**

5.1 Monogenic versus multifactorial inheritance .....	138
5.2 Mendelian pedigree patterns.....	139
5.3 Mosaicism and new mutations.....	146

5.4 Non-Mendelian characters.....	150
Summary.....	156
Further reading.....	156

## PART 2 UNDERSTANDING GENOMES

### 6 CORE DNA TECHNOLOGIES: AMPLIFYING DNA, NUCLEIC ACID HYBRIDIZATION, AND DNA SEQUENCING..... 161

6.1 Cloning DNA in bacterial cells.....	162
6.2 Amplifying DNA by <i>in vitro</i> DNA replication.....	170
6.3 Nucleic acid hybridization: principles and uses.....	174
6.4 DNA sequencing principles and Sanger dideoxy sequencing.....	183
6.5 Massively-parallel DNA sequencing (next-generation sequencing).....	186
Summary.....	200
Further reading.....	201

### 7 ANALYZING THE STRUCTURE AND EXPRESSION OF GENES AND GENOMES..... 203

7.1 Genome structure analysis and genome projects.....	203
7.2 Basic gene expression analyses.....	219
7.3 High-throughput gene expression analyses.....	224
7.4 Single-cell genomics.....	233
Summary.....	240
Further reading.....	240

### 8 PRINCIPLES OF GENETIC MANIPULATION OF MAMMALIAN CELLS..... 243

An overview of genome editing, gene silencing, and germ-line transgenesis.....	
8.1 Artificial transfer of genetic material into mammalian cells.....	246
8.2 Principles of transgene expression in mammalian cells.....	257
8.3 Genome editing using homologous recombination.....	260

8.4 Genome editing using programmable site-specific endonucleases.....	263
8.5 Gene silencing.....	268
8.6 Germ-line transgenesis and transgenic animals.....	271
Summary.....	277
Further reading.....	278

### 9 UNCOVERING THE ARCHITECTURE AND WORKINGS OF THE HUMAN GENOME..... 279

9.1 An overview of the human genome.....	279
9.2 Gene organization and distribution in the human genome.....	296
9.3 Heterochromatin DNA and transposon repeats.....	306
9.4 A start on working out how our genome functions.....	311
Summary.....	321
Further reading.....	322

### 10 GENE REGULATION AND THE EPIGENOME..... 325

10.1 Chromatin accessibility and conformation.....	326
10.2 Histones and other DNA-binding proteins.....	328
10.3 Regulation by DNA methylation and noncoding RNAs.....	332
10.4 X-inactivation, imprinting, and epigenetic memory.....	337
10.5 Making the transcript: promoters and enhancers.....	345
10.6 Post-transcriptional regulation.....	350
Summary.....	355
Further reading.....	356

## PART 3 GENETIC VARIATION BETWEEN INDIVIDUALS AND SPECIES

### 11 AN OVERVIEW OF HUMAN GENETIC VARIATION..... 361

11.1 Origins of DNA sequence variation.....	362
11.2 DNA repair.....	366
11.3 Population genomics and the scale of human genetic variation.....	371

11.4	Functional genetic variation and protein variation .....	381
11.5	Extraordinary genetic variation in the adaptive immune system .....	386
	Summary .....	395
	Further reading .....	396
<b>12</b>	<b>HUMAN POPULATION GENETICS .....</b>	<b>397</b>
12.1	Allele frequencies and genotype frequencies: the Hardy–Weinberg relationship .....	397
12.2	Haplotype frequencies and linkage disequilibrium .....	399
12.3	Changing allele frequencies.....	404
12.4	Population structure and inbreeding.....	411
	Summary .....	415
	Further reading .....	416
<b>13</b>	<b>COMPARATIVE GENOMICS AND GENOME EVOLUTION .....</b>	<b>419</b>
13.1	Comparative genomics .....	419
13.2	Gene duplication, species differences in gene number, and evolutionary advantages of exons .....	432
13.3	Evolution of mammalian chromosomes .....	440
13.4	Regulatory sequence evolution and transposon origins of functional sequences .....	448
13.5	Phylogenetics and our place in the tree of life.....	454
	Summary .....	457
	Further reading .....	458
<b>14</b>	<b>HUMAN EVOLUTION .....</b>	<b>461</b>
14.1	Human origins .....	461
14.2	Human evolutionary history from genome sequences.....	467
14.3	Inferring female and male histories using mitochondrial DNA and the Y chromosome.....	476
14.4	Health consequences of our evolutionary history .....	480
	Summary .....	486
	Further reading .....	487
<b>PART 4 HUMAN GENETIC DISEASE</b>		
<b>15</b>	<b>CHROMOSOMAL ABNORMALITIES AND STRUCTURAL VARIANTS.....</b>	<b>491</b>
15.1	Studying human chromosomes .....	491
15.2	Gross chromosome abnormalities .....	497
15.3	Structural variants, microdeletions, and microduplications .....	504
	Summary .....	512
	Further reading .....	513
<b>16</b>	<b>MOLECULAR PATHOLOGY: CONNECTING PHENOTYPES TO GENOTYPES .....</b>	<b>515</b>
16.1	Loss of function .....	516
16.2	Gain of function.....	527
16.3	Dynamic mutations: unstable repeat expansions.....	532
16.4	Molecular pathology of mitochondrial disorders .....	535
16.5	Genotype–phenotype correlations .....	538
	Summary .....	546
	Further reading .....	547
<b>17</b>	<b>MAPPING AND IDENTIFYING GENES FOR MONOGENIC DISORDERS .....</b>	<b>549</b>
17.1	Positional cloning seeks to identify disease genes by first mapping them to a precise chromosomal location .....	550
17.2	Haplotype sharing and autozygosity .....	556
17.3	Whole-exome and whole-genome sequencing allow an unbiased and hypothesis-free approach to identifying the cause of a monogenic condition.....	559
17.4	Strategies for exome-based disease-gene identification.....	562
17.5	Confirming that the candidate gene is the correct one.....	566
	Summary .....	570
	Further reading .....	570

<b>18 COMPLEX DISEASE: IDENTIFYING SUSCEPTIBILITY FACTORS AND UNDERSTANDING PATHOGENESIS</b> .....	573
Introduction.....	573
18.1 Investigation of complex disease: epidemiological approaches .....	574
18.2 Investigation of complex disease using linkage.....	577
18.3 Investigation of complex disease using association.....	579
18.4 The limitations of genome-wide association studies.....	588
18.5 What have we learned about the genetics of complex characters? .....	591
Summary .....	594
Further reading .....	595
<b>19 CANCER GENETICS AND GENOMICS</b> .....	597
Introduction.....	597
19.1 Oncogenes .....	599
19.2 Tumor suppressor genes .....	605
19.3 Key oncogenes and tumor suppressor genes work mainly to regulate cell cycle checkpoints and genome maintenance .....	610
19.4 A genome-wide view of cancer .....	614
19.5 Using our new understanding of cancer .....	623
Summary .....	627
Further reading .....	627
<b>PART 5 APPLIED HUMAN MOLECULAR GENETICS</b>	
<b>20 GENETIC TESTING IN HEALTHCARE AND THE LAW</b> .....	631
20.1 What to test and why .....	632
20.2 Testing for a specific genetic variant.....	633
20.3 Clinical diagnostic testing .....	637
20.4 Population screening .....	642
20.5 Pharmacogenetics and personalized medicine.....	651
20.6 DNA forensics: identifying individuals and relationships .....	657
Summary .....	664
Further reading .....	665
<b>21 MODEL ORGANISMS AND MODELING DISEASE</b> .....	667
21.1 An overview of model organisms.....	667
21.2 Cellular disease models .....	673
21.3 Origins of animal models of genetic disorders .....	678
21.4 How useful are animal models of genetic disorders? .....	685
Summary .....	691
Further reading .....	692
<b>22 GENETIC APPROACHES TO TREATING DISEASE</b> .....	695
22.1 An overview of treating genetic disease and of genetic treatment of disease.....	696
22.2 Treating disease with genetically-engineered therapeutic proteins.....	699
22.3 Basic principles of gene therapy and RNA therapeutics .....	703
22.4 The practice of gene augmentation therapy for treating recessively inherited disorders .....	710
22.5 RNA therapeutics, therapeutic genome editing prospects, and genetic approaches to preventing disease .....	714
Summary .....	720
Further reading .....	721
<i>Glossary</i> .....	723
<i>Index</i> .....	743
